

## Woodpecker Bird Hazing Device

**Pileated Woodpecker Silhouette**

**Northern Flicker Silhouette**

Woodpeckers are very territorial, so they steer clear of wood utility poles when they see our painted metal woodpeckers on the scene! Choose either the northern flicker silhouette or the larger pileated woodpecker silhouette.

Our metal Woodpecker silhouettes are time tested protection against damage caused by woodpeckers to wood power line poles and wood homes, cabins, and other structures. The likeness to a living bird makes other woodpeckers avoid the occupied territory.

Choose from our northern flicker silhouette (p/n # WP-100-FLI) or the larger pileated woodpecker silhouette (p/n #WP-100-PIL). The northern flicker silhouette includes special UV paint that stands out in the visual spectrum of woodpeckers. Both silhouettes are painted both sides, then finished with a high quality transparent coating.

Made from 1.5mm thick aluminum plate, the Woodpecker bird diverters are tough and durable, ready to screw into place where needed. They come with rust-resistant screws (6.5 x 50mm). There is also a 13mm hole for clipping into a snap-hook while climbing poles.
