

FireFly® WM Bird Hazing/Diverter

FireFly WM bird hazing/diverter

The FireFly WM bird hazing/diverter employs the same bird deterring technologies as our industry leading FireFly FF bird diverter for power lines, but the FireFly WM hangs from a metal “L” bracket. It is easy to install using the included wood screws. Alternatively, straps may be used for installation on poles.

Birds can be a serious nuisance and sometimes a hazard around wood utility poles, buildings, and other wooden structures. Their droppings create a mess and can lead to equipment damage and outages. Woodpeckers and flickers can also damage the wood itself.

FireFly WM Features

- Fully tested and developed by an avian biologist and shown in independent studies to be the most effective bird diverter.
- Rotates in wind, increasing visibility for birds and bats. Uses a stainless steel ball bearing swivel resistant to salt spray and adverse weather conditions.
- Features unique Moon/Shine™ system, which pairs glow-in-the-dark (10–12 hours) material with highly reflective daylight material.
- Emits special UV light that birds can see in low light or fog conditions.
- Utilizes a 3-in-1 combination of fluorescent colors designed specifically for avian vision.
- The impact resistant and UV-stabilized acrylic “flapper” is 3.5" x 6", 1/8" thick, and rated for temperatures from –30 F to 160 F.
